

# We are accelerating the transformation of energy systems, buildings, transportation, and food waste management.

## Transitioning to Clean Energy

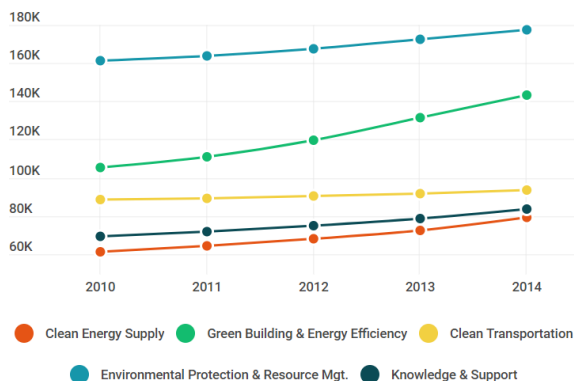

We have experienced over 250% increase in non-hydroelectric renewable energy from 2005 to 2015 in Pacific Coast jurisdictions through investments in wind and solar and policies like Renewable Portfolio Standards.

\* Non-hydroelectric renewable energy has increased more than 250% from 2005 to 2015.

## Growing the Low-Carbon Economy

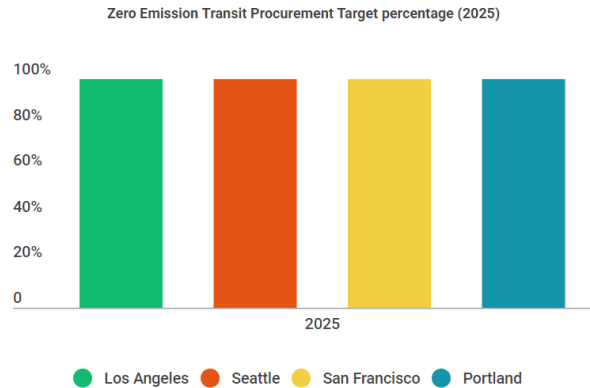

We have had a 20% growth in clean economy jobs on the West Coast over just four years from 2010 to 2014. West Coast clean economy jobs grew more than twice as fast as regional jobs overall during the same period.

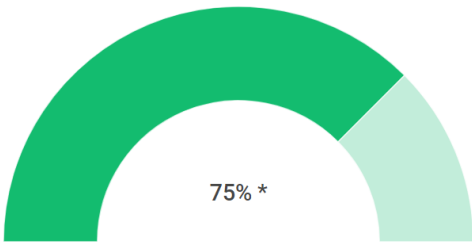

## Transforming Transportation

Our governments are investing in a variety of options for low-carbon mobility. Our major cities are working with urban transit agencies to procure only zero-emission transit buses by 2025.

## Decarbonizing Buildings

75% percent of all building square footage on the West Coast that PCC jurisdictions have committed to implement commercial building bench marking and disclosure programs.

\* percent of all building square footage
